

FARADAY PROTECTION

SHIELD CASE

Shielded case is designed according to the Faraday cage principle. It serves as a complete protection of the laptop against eavesdropping and location tracking using navigation systems. Access to all mobile networks used worldwide is blocked, including the 5G network. The case is suitable both for protection when traveling and during your meetings as well as at home.

Thanks to the Faraday cage principle, the case conducts the electromagnetic charge along the outer surface of the case and does not pass it to the device inside. The case is effectively protected against a wide range of different signals. So you don't have to worry about any danger

The cases are also popular with forensics experts, allowing them to protect evidence from hackers looking to manipulate data remotely. This will remain data protected against deletion during a cyber attack. In addition, the laptop in the shielded case is also protected against connection to fake Wi-Fi, Bluetooth and NFC points, which are widely used by hackers to gain access to the device. You can also use the Faraday cage for a laptop as a case for cards with RFID chips, which can also provide comprehensive protection.

FARADAY PROTECTION

Shielded Laptop Case

- > The shielded case protects against wireless communication – actively blocks Internet connection through fake Wi-Fi, Bluetooth and NFC points.
- > It couldn't be easier to use – simply put the device in the case and then close it.
- > The notebook is immediately completely disconnected from the mobile network – the case effectively protects against connection to all global mobile networks, even without turning off the device.
- > Maximum laptop protection against eavesdropping – Your meetings and household will remain completely safe and sensitive information will no longer have a chance to escape.
- > Used by forensic experts as protection against remote data manipulation – complete security against cyber attacks.
- > Protect your privacy even on the go – the case blocks location tracking using satellite systems, and it also includes a strap for convenient carrying.
- > State-of-the-art military materials for increased drop protection, water resistance and a double shielding layer. In addition, the shielded case is completely discreet.
- > Protection of RFID cards and documents with an RFID chip.

Shielded Mobile Phone Case

- > Quick isolation from the network – the shielded, impermeable housing prevents the device inside from connecting to any global mobile networks.
- > Data is safe from deletion – thanks to the isolation of the case, even the data inside the phone is secure.
- > Your location stays safe – your device is effectively shielded from location tracking when inserted into the shielded case, so you're protected both on the go and during meetings.
- > The case blocks all wireless communication – preventing connection to Bluetooth, Wi-Fi and NFC.
- > The case can also be used as a shielding case for RFID cards – it will also protect your contactless payment card or passport.
- > Designed from the latest waterproof materials with a double shielding layer – lightweight yet durable.
- > Effective mobile phone protection against eavesdropping – the phone stored in the security shielded case is actively protected against all types of eavesdropping.
- > It won't interfere with a police investigation – the phone inside is blocked against attack. Important evidence inside the phone is completely safe.
- > Simplicity and intuitiveness – just insert the phone into the case, and then close it tightly with Velcro.

Parameters

Shielded Laptop Case 15"-16"

Weight

335 g

External dimensions

45,5 cm x 31,5 cm

Shielded Laptop Case 13"-14"

Weight

290 g

External dimensions

36 cm x 27 cm

Shielded Mobile Phone Case

Weight

55 g

External dimensions

11,5 cm x 19 cm
